OpenTable Launches Application for Palm webOS

Palm Pre Users Can Now Find and Make Online Restaurant Reservations On-the-Go

SAN FRANCISCO, Jul 29, 2009 (BUSINESS WIRE) -- OpenTable, Inc. (NASDAQ: OPEN) (www.opentable.com), a leading provider of free online reservations for diners and guest management systems for restaurants, today announced that its application for the Palm(R) Pre(TM) phone is available in Palm Pre's on-device beta App Catalog. Making it easier than ever for people to find and book reservations on-the-go, OpenTable for the Palm webOS(TM) platform allows diners to check the availability of multiple restaurants in the area; read restaurant reviews; get the location of the restaurants; make free, confirmed reservations; invite friends to join them; and, then follow directions to the restaurant [1].

OpenTable's second mobile application to date, OpenTable for Palm webOS, includes several new features, like the ability to view comments about particular restaurants from actual diners. The application takes advantage of the unique capabilities of Palm webOS, allowing OpenTable users to integrate their reservations into the phone's calendar and even modify reservations if plans change.

"The ability to find and book available tables at nearby restaurants, and read reviews before booking - all from your mobile device - is an incredible time-saver," said Caroline Potter, chief dining officer at OpenTable. "After a long day at work, a late meeting, or drinks with friends, diners can use OpenTable for Palm webOS to quickly find and confirm an available table at a nearby restaurant--without having to make calls to multiple restaurants or wait on hold."

Diners simply specify the desired date, time and party size, and they are immediately provided with a list of available tables at restaurants in the vicinity. They can also view results on a map, get directions to the restaurants, and send emails complete with reservation information to friends. With OpenTable for Palm webOS, registered OpenTable members can see their upcoming reservations, earn OpenTable Dining Points and view their current points balances. OpenTable for Palm webOS users can also book 1000-Point reservations with their mobile phones, allowing them to earn free meals faster than ever before.

For more information on OpenTable for Palm webOS, please visit www.opentable.com/palm. The application was developed in close collaboration with Goodrec, Inc., a social recommendation engine and is available for download today in the Palm Pre's on-device beta App Catalog.

About the Palm Pre Phone

Palm Pre is the first phone running the new Palm webOS(TM) platform, which brings together your important information from where it resides - on your phone, at your work or on the web - into one logical view. Palm Synergy(TM), a key feature of webOS, pulls your contacts and calendars from places like Outlook, Google and Facebook, so everything is right there for you when you need it. Palm Pre also lets you flip back and forth between all the things you have open at once--instead of opening and closing them--so you can flow easily between activities without losing your place. Palm Pre's exquisite design includes a touch screen and a physical keyboard that slides out only when needed. More information about the Palm Pre phone is available at www.palm.com/Pre.

About OpenTable, Inc.

OpenTable is a leading provider of free, real-time online restaurant reservations for diners and reservation and guest management solutions for restaurants. The OpenTable network delivers the convenience of online restaurant reservations to diners and the operational benefits of a computerized reservation book to restaurants. OpenTable has more than 10,000 restaurant customers, and since its inception in 1998, has seated more than 100 million diners around the world. The company is headquartered in San Francisco, California, and the OpenTable service is available throughout the United States, as well as in Canada, Germany, Japan, Mexico, and the United Kingdom.

[1] Use of this device requires providing a valid e-mail address, mobile phone number and related information for account setup and activation. Unlimited usage data plan strongly recommended; additional data charges may apply. Within wireless coverage area only. Number of applications and actual performance will vary depending on applications used and actions performed.
